

SUREWALL® SURFACE BONDING CEMENT

RETROFIT

The versatility of SUREWALL® Surface Bonding Cement makes it ideal for economical remodeling. It puts a tough, good-looking finish over almost any substrate. And SUREWALL® Surface Bonding Cement increases the structural integrity of walls with weak mortar joints.

DRystack

You can build an amazing kind of wall by stacking concrete blocks without mortar and covering them with SUREWALL® Surface Bonding Cement in a coat as thin as 1/2". When you coat both sides of a wall, the result is stronger than concrete block and mortar.

STUCCO

SUREWALL® Finish Coat can provide a superior finish that looks like stucco but is more water resistant and much stronger. And it comes in six good-looking colors. What's more, you can use any finishing technique that works with stucco.

DAMP-PROOFING

SUREWALL® Surface Bonding Cement replaces the parge coat often used to provide moisture protection for foundations. No further surface protection is necessary. And no telegraphing of joints.
